

THERMOGRID

THE CADAC THERMOGRID

The unique CADAC ThermoGrid® gives you even heat distribution, quick heat-up time and less gas consumption.

1. EVEN HEAT DISTRIBUTION

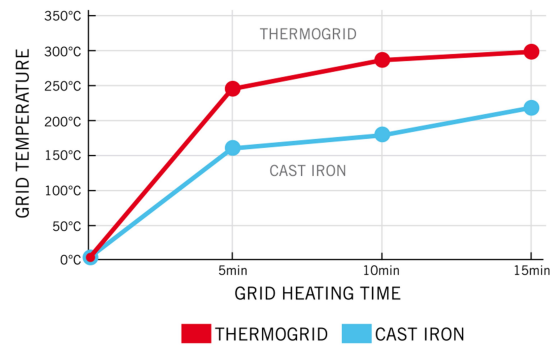

2. QUICKER HEAT-UP TIME

The **ThermoGrid®** heat-up time is as follows:

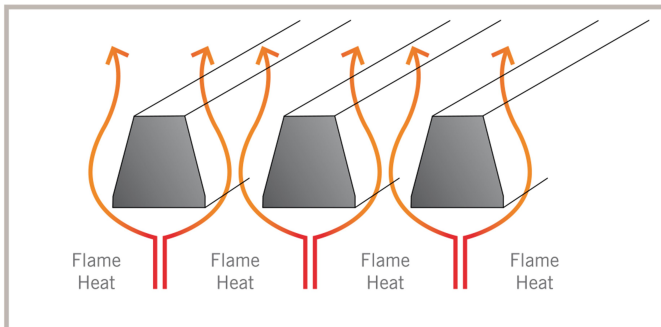

0° to 220° = 05 minutes

0° to 280° = 08 minutes

The “U” Grid traps and distributes the heat evenly. **ThermoGrid®**: ensures even cooking temperatures from front to back.

3. LESS GAS CONSUMPTION

CAST IRON: HEAT IS LOST

34% GAS SAVING!

With a normal cast iron the heat goes around the grid and escapes out of the dome. This results in heat loss, because the heat passes the cast iron and does not ensure constant even heat distribution.

THE BIG 5 INNOVATION BY CADAC
